## AROMA MIKADO

This is one of the more highly marketed products in terms of air fresheners for the home. Evaporation is achieved through bamboo or rattan absorbing rods that are introduced into the bottle. It is elegant, decorative, and at the same time effective for small areas.

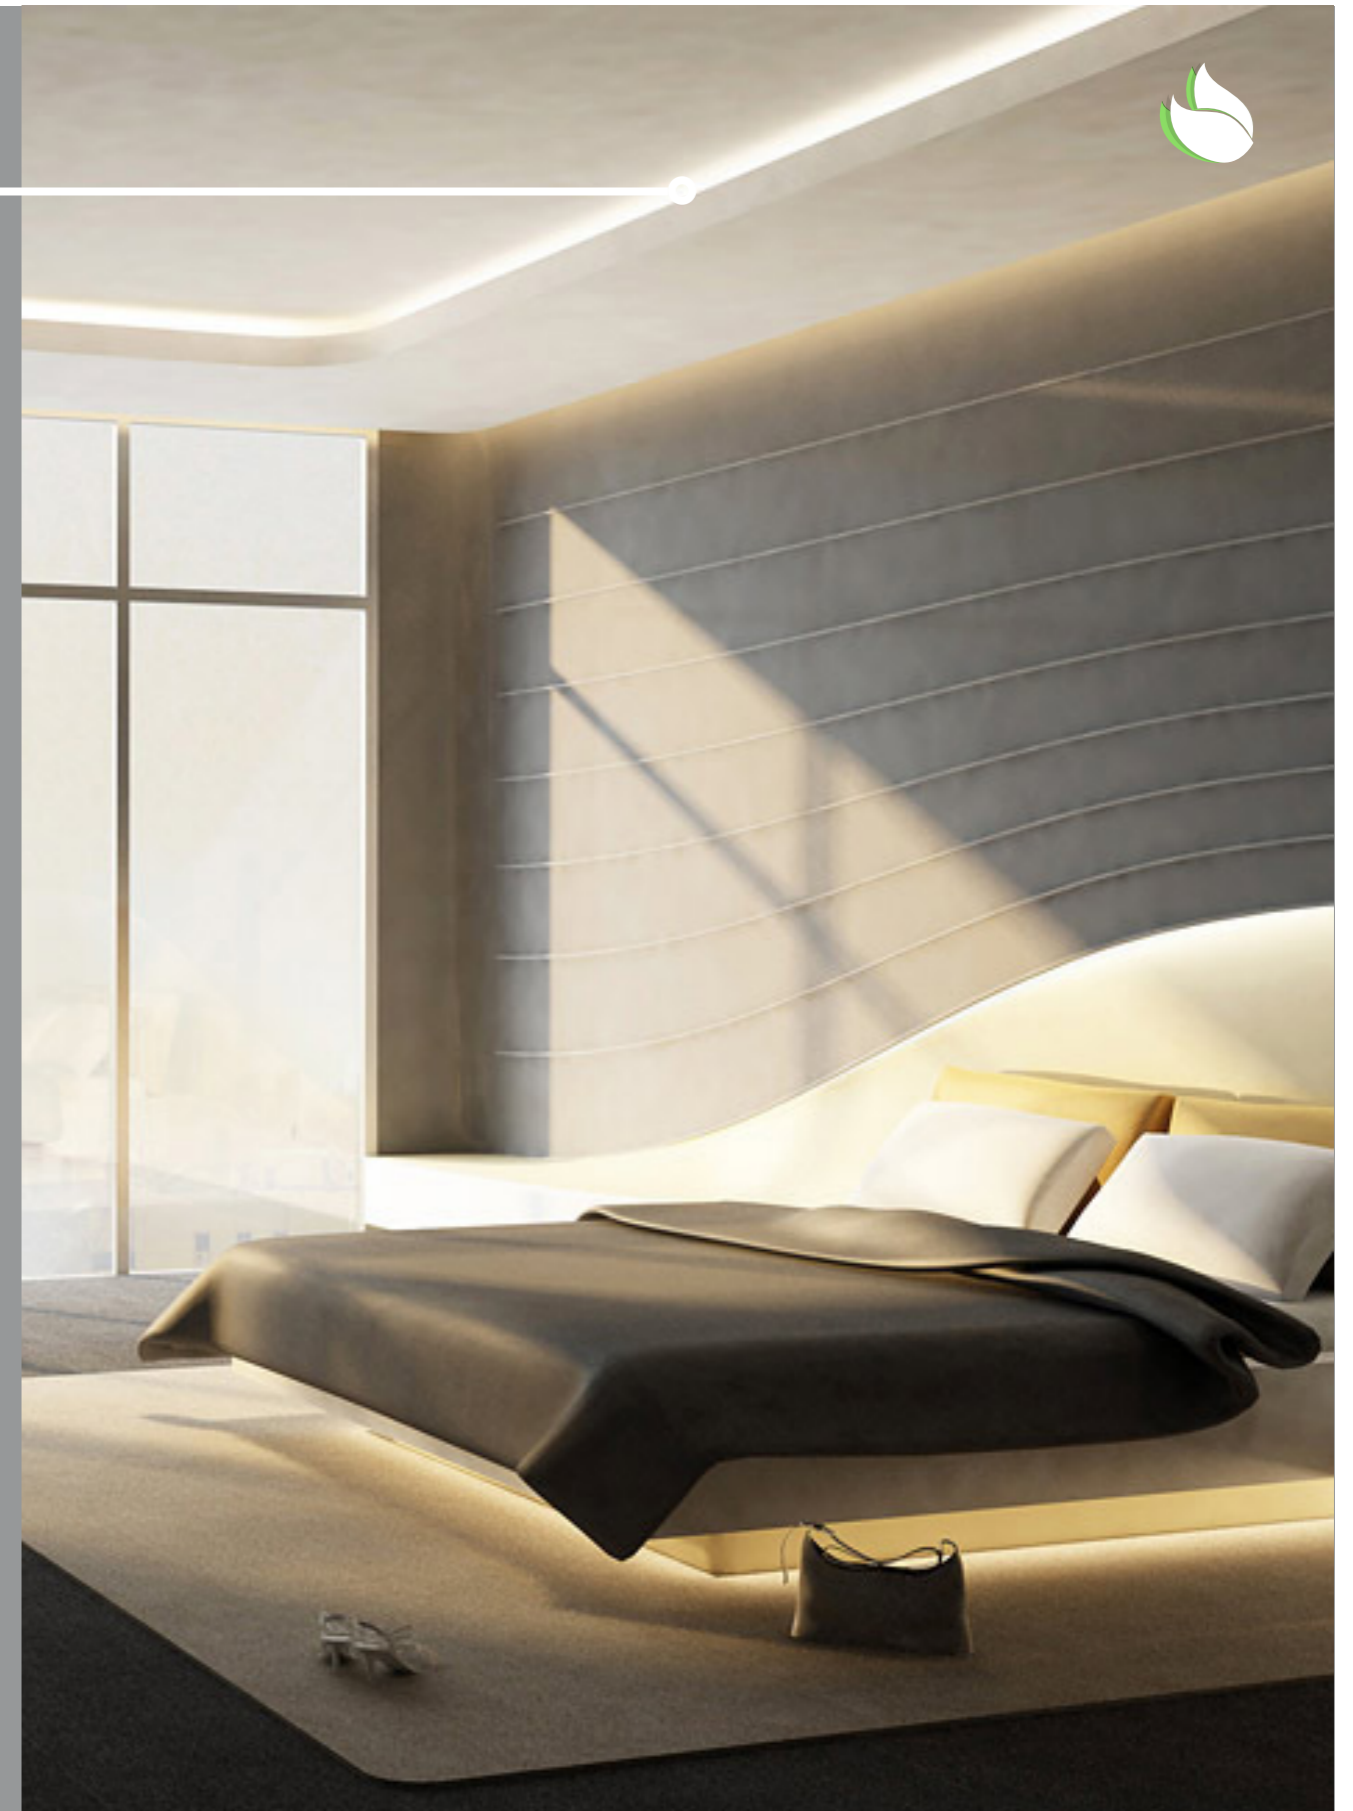

## PRESTATIONS

This product is presented in a one liter bottle so the client can then select the decorative container of his/her choosing and the one that better suits his/her needs. The container will then be refilled as the product is consumed. The container is reused to its fullest extent, therefore producing a more economic product. This product is an ideal addition to scent hotel rooms. Furthermore, Marketing Olfativo offers the possibility of making a 100 or 200 ml square or cylinder container to be used with a personal corporate aroma as a merchandising item, to be sold or given as a gift to your clients. It is an ideal decorative product for the home and enhances the memory of your visit.

## TECHNICAL FEATURES

The main advantage of the Mikado air freshener is that it is a natural product that does not consume any type of energy and still, it presents greater efficiency levels in comparison to other conventional electronic air fresheners. Another advantage of the Mikado air freshener is its decorative impact.
